*As a percentage of average daily NAV for the quarter valued at Php 202,036,817.07.

INVESTMENT OBJECTIVE AND STRATEGY

Aims to prevent loss of principal at all times and generate stable income by investing in a diversified portfolio of short term fixed income marketable securities allowed under the plan and under regulations issued by the BSP. The Fund aims to surpass its benchmark (gross of fees) equivalent to 91-day PDS Treasury Reference Rate PM (PDST R-2).

CLIENT SUITABILITY

A client profiling process should be performed prior to participating in the Fund to guide the prospective investor if the Fund is suited to his/her investment objectives and risk tolerance. Clients are advised to read the Declaration of Trust/Plan Rules of the Fund, which may be obtained from the Trustee, before deciding to invest.

The AB CAPITAL SHORT TERM FUND is suitable for individual and corporate investors who are at least classified as moderate based on their risk profile and who are looking for investments with yields relatively higher than those of savings and time deposit accounts.

In order to minimize risks and maximize returns, the participants are recommended to stay invested in the Fund for at least one (1) year.

KEY RISKS AND RISK MANAGEMENT

You should not invest in this Fund if you do not understand or are not comfortable with the accompanying risks.

Interest Rate Risk	Possibility for an investor to experience losses due to the changes in interest rate. The purchase and sale of a debt instrument may result in profit or loss because the value of a debt instrument changes inversely with prevailing interest rates.
Market/Price Risk	This is the possibility for an investor to experience losses due to the changes in market prices of securities (e.g., bonds and equities). It is the exposure to the uncertain market value of a portfolio due to price fluctuations. It is the risk of the UITF to lose value due to a decline in securities prices, which may sometimes happen rapidly or unpredictably. The value of investments fluctuate over a given time period because of general market conditions, economic changes or other events that impact large portions of the market such as political events, natural calamities, etc. As a result, the Net Asset Value per Unit (NAVPU) may increase to make profit or decrease to incur loss.
Liquidity Risk	This is the possibility for an investor to experience losses due to the inability to sell or convert assets into cash immediately or in instances where conversion to cash is possible but at a loss. These may be caused by different reasons such as trading in securities with small or few outstanding issues, absence of buyers, limited buy/sell activity or underdeveloped capital market. Liquidity risk occurs when certain securities in the UITF portfolio may be difficult or impossible to sell at a particular time which may prevent the redemption of investment in UITF until assets can be converted to cash.
Credit/Default Risk	Possibility for an investor to experience losses due to borrower's failure to pay principal and/or interest in a timely manner on instruments such as bonds, loans, or other forms of security which the borrower issued. Inability of the borrower to make good on its financial obligations may have resulted from adverse changes in its financial condition thus, lowering credit quality of the security, and consequently lowering the price (market/price risk) which contributes to the difficulty in selling such security. It also includes risk on a counterparty (a party the UITF Fund Manager trades with) defaulting on a contract to deliver its obligation either in cash or securities. This is the risk of losing value in the UITF portfolio in the event the borrower defaults on his obligation or in the case of a counterparty, when it fails to deliver on the agreed trade. This decline in the value of the UITF happens because the default/failure would make the price of the security go down and may make the security difficult to sell. As these happen, the UITF's NAVPU will be affected by a decline in value.

*** THE UIT FUND IS NOT A DEPOSIT AND IS NOT INSURED BY THE PHILIPPINE DEPOSIT INSURANCE CORP. (PDIC).**
*** RETURNS CANNOT BE GUARANTEED AND HISTORICAL NAVPU IS FOR ILLUSTRATION OF NAVPU MOVEMENTS/ FLUCTUATIONS ONLY.**

WEALTH BANK PESO TD (WEALTH) - Php 21,665,128.22

Investments in the said outlets were approved by the Trust Committee. Likewise, all related party transactions are conducted on an arm's length and best execution basis and within established limits.

OUTLOOK AND STRATEGY

Fixed-Income Market

The Bangko Sentral ng Pilipinas (BSP) raised its key policy rate twice in the third quarter, hiking by 50 basis points each in the August and September Monetary Board meeting to bring the overnight policy rate to 4.50%, the highest since March 2009. BSP noted that further tightening of monetary policy was warranted due to persistent signs of sustained and broadening price pressures, with risks still leaning to the upside. On its inflation outlook, BSP revised its 2018 average inflation forecast to 5.2% from 4.9% previously and the 2019 average inflation forecast to 4.3% from 3.7% previously.

September headline inflation reached 6.7%, lower than the 6.8% consensus estimate, but higher than the previous month's print of 6.4%. Year to date, inflation averaged at 4.95%. Core inflation, meanwhile, eased to 4.7% from 4.8% the previous month. The key price drivers were food and non-alcoholic beverages (+9.7%), alcoholic beverages and tobacco (+21.8%), and transport (+8.0%).

The government plans to borrow P270 billion for the last quarter of 2018, 10% lower than the P300 billion programmed for the third quarter. However, this is 80% higher than the P150 billion programmed during the last quarter of 2017 according to the Bureau of Treasury. Out of the total, P180 billion would be in Treasury Bills with tenors of 91, 182 and 364 days while P90 billion would be in Treasury Bonds with tenors of 5, 7 and 10 years.

In the third quarter of 2018, local benchmark yields climbed by an average of 104 basis points, in line with market expectations of BSP's policy response to inflation. The belly and the long-end of the yield curve saw higher movements, rising by 162 and 87 basis points respectively while the short-end of the curve rose by 60 basis points, supported by end user demand for short-dated securities.

AB Capital Short-Term Fund Performance

The AB Capital Short-Term Fund posted a return of 0.61% in the third quarter of 2018. The Net Asset Value Per Unit (NAVPU) increased to 1.0716 in September 2018 from 1.0651 last June 2018.

Fund Strategy

Bond yields are expected to move sideways with an upward bias due to continued policy normalization by the US Federal Reserve, hawkish stance by the BSP to anchor inflation expectations and the continued local borrowing program of the government. The Fund will continue to focus its investments on time deposit placements and treasury bills.

LIST OF PROSPECTIVE INVESTMENTS

Pursuant to the foregoing objectives, the Fund may be invested and reinvested in:

- a) Fixed-income securities issued by the government of the Republic of the Philippines with maximum remaining maturities of one (1) year and are traded in an organized exchange or market;
- b) Deposits with local banks and branches of foreign banks operating in the Philippines.
- c) Other investments allowed under regulations issued by the BSP.

The combined exposure of the Fund to any entity and its related parties shall not exceed fifteen percent (15%) of the market value of the Fund. Provided, that Fund investments, partially or substantially, in exchange traded fixed income securities shall be subject to the fifteen percent (15%) exposure limit.

AB Capital is regulated by the Bangko Sentral ng Pilipinas (BSP).
